

MOHAMED MOSAAD

FLUTTER DEVELOPER

+20 1220530706 | engmohamedmosaad285@gmail.com | Tanta,Egypt (Open to Remote) | [Linkedin](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Flutter Developer and Founder of FAD (Future Application Developers), a software engineering training and collaboration initiative that simulates a professional software house for students and junior developers. Combines hands-on Flutter/Dart development with proven leadership across 13+ collaborative software projects, technical mentorship of junior developers, and cross-functional team coordination. Skilled in architecting scalable, high-performance mobile applications using Clean Architecture and modern state management (Cubit, Provider), with practical experience in RESTful API integration and Agile/Scrum collaboration. Committed to continuous learning and contributing to impactful, international mobile engineering teams.

SKILLS

Programming Languages: Dart

Frameworks: Flutter

Architecture: Clean Architecture, MVVM

State Management: BLoC (Cubit), Provider

Backend & APIs: RESTful APIs, HTTP, Dio, Firebase

Databases: SQL, SQLite

Version Control: Git, GitHub, Git Flow, Pull Requests, Code Reviews

CI/CD: GitHub Actions

Tools: Postman, Figma

Software Engineering Principles: OOP, SOLID, Clean Code, Data Structures & Algorithms, Responsive UI Design

Soft Skills

Leadership · Technical Mentorship · Team Collaboration · Communication · Problem Solving · Critical Thinking · Time Management · Agile/Scrum · Adaptability

EXPERIENCE

Founder & Flutter Engineering Lead | FAD (Future Application Developers)

2026 – Present

FAD is a software engineering training and collaboration initiative that simulates a professional software house, giving students and junior developers real-world team experience across multiple concurrent projects.

- Founded and currently lead FAD, designing and organizing the engineering workflow used across all collaborative development teams.
- Coordinate 13+ active software projects across multiple development teams, spanning restaurant management, clinic management, property rental, gym, internship, and marketplace platforms.
- Coordinate cross-functional teams of Flutter developers, backend developers, UI/UX designers, QA testers, and project managers.
- Plan software architecture and project roadmaps for each development team from planning through deployment.
- Manage GitHub repositories and enforce Git Flow, feature-branch workflows, pull requests, and code reviews across teams.
- Establish development standards grounded in Clean Architecture and SOLID principles, applying Agile/Scrum methodologies throughout the development lifecycle.
- Review Flutter code contributed by team members and mentor junior developers, helping them build real-world engineering skills before entering the industry.

2024 – Present

Flutter Developer | Personal Projects

- Design and develop cross-platform Flutter applications end-to-end, applying Clean Architecture and SOLID principles.
- Implement state management (Cubit, Provider) to build predictable, maintainable app logic.
- Integrate RESTful APIs and local data storage (SQL/SQLite) to deliver responsive, data-driven user experiences.
- Maintain version-controlled codebases on GitHub as part of an ongoing public portfolio.

PROJECTS

HandMade Hub – Handmade E-commerce Mobile Application

A full-featured e-commerce mobile application for discovering and purchasing handmade products.

- Developed product browsing, categories, search, filtering, product details, cart, wishlist, and order management features.
- Implemented user authentication and profile management workflows.
- Integrated RESTful APIs to handle dynamic product, user, and order data.

Architecture / State Management / Stack: Clean Architecture · Cubit/BLoC · Flutter · Dart · REST APIs · Dio · SQLite

E-Commerce Application

Cross-platform mobile shopping application built with Flutter for managing online shopping workflows.

- Developed core e-commerce features including authentication, product listing, product details, cart management, and checkout flow.
- Implemented state management using Cubit to create predictable and maintainable application logic.
- Integrated APIs for retrieving and managing product data using Dio.
- Designed modern responsive interfaces following Flutter best practices.
- Applied clean code principles and modular architecture for better project scalability.

Architecture / State Management / Stack: Clean Architecture · Cubit/BLoC · Flutter · Dart · REST APIs · Dio · SQLite

CERTIFICATIONS

- NTI Training Program

EDUCATION

FacultyofComputersandInformation – Tanta University | Expected Graduation: 2028

LANGUAGES

Arabic (Native) · English (Intermediate)
